# Advanced Expertise

## Global Bespoke Solutions

Water is an essential part of life, from sustainment to enhancement. But access to fresh water is far from guaranteed. It was this shortage of fresh water solutions that led to the founding of Advanced Watertek in 1984. We had a simple vision; to provide tailor-made, state-of-the-art Reverse Osmosis (RO) systems that purify brackish water, seawater and tertiary water for the industries that need it the most, in the places that need it the most.

Today, thousands of our innovative RO systems have been installed across 6 continents, in over 50 countries, from United Arab Emirates to Australia, China to USA.

For 35 years, we have led the industry in our commitment to excellence, quality and performance. Each client, project and system is offered the highest levels of service and dedication, so we can provide bespoke water solutions across the world.

Our unique outlook has always been focused on the solution, not the bottom line. That is why we are the leading membrane based water treatment solutions provider. Built by engineers, the company remains dedicated to providing the highest quality, customised solutions that won't let you down. In the words of our Founder and Managing Director, "If you can't do something right, don't do it at all"

excellence

Millions of gallons  
of clean water  
per day

Machines running  
over decades

Only high quality  
components sourced  
from Europe,  
Japan and USA

80% repeat  
business

# Advanced Commitment

## Our Promise To You

Our commitment to our clients, suppliers and employees remains at the forefront of our endeavours.

### Trust / Expertise / Experience

We have 35 years experience in creating pure water, no matter the requirement, all over the world. Our in-house experts can easily understand your needs and recommend the most effective solutions to suit your specific conditions.

### Innovation

Our entire company, from buyers to engineers, understands the potential for advancements and new discoveries. We continually ensure that each element of our processes is as efficient and as effective as possible. Whether it is our innovation, or an industry innovation, you can trust we will be one of the pioneers.

### Quality

From our designs, to our components, to our manufacturing, to our after-sales service, each stage must be of the highest quality. We only source the best components and we manufacture and assemble our systems ourselves, so we can guarantee the best quality to you, every time.

### Service

In an increasingly globalised world of competition and opportunity, we believe it is our high level of service that sets us apart. We believe in providing prompt personalised service to each client.

### Safety

We are committed to maintaining the highest levels of safety within our organisation and on every project we undertake. Since our inception, the safety of staff and those operating our machines have been our top priority.

### Environment

We assume a proactive approach on environmental issues. Our aim is to minimise environmental impact, while still providing robust, cost-effective and enduring solutions to our clients.

### Tomorrow

A truly global company must always keep an eye on tomorrow. From sustainably prioritising energy efficiency to offering clients the most up-to-date solutions, we are contributing to a future we can all be proud of.

# Advanced Performance

## You shouldn't have to worry about your water supply

Securing pure, running water might well be an essential component of your site or infrastructure, but it is rarely your overall priority. From oil rigs to hospitality resorts, we can provide a high-quality and reliable pure water solutions so you can get on with what really matters.

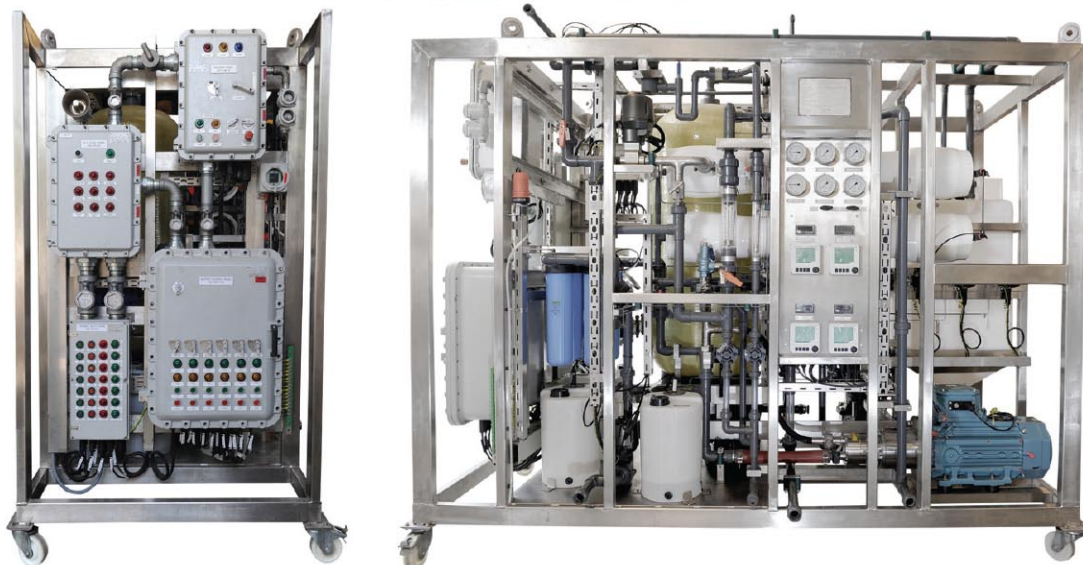

### Putting Your Mind at Ease

Our commitment ensures that you never have to worry about your water supply and that you have a high-performing dependable, constant source for as long as you need it.

### Meeting Needs, Exceeding Targets

Our systems are not only designed with built-in high safety margins and energy efficiency, but they are made using the best components available. This unique approach creates systems that:

- ▶ Last for decades
- ▶ Operate efficiently
- ▶ Require minimal maintenance
- ▶ Meet the most stringent standards and regulations
- ▶ Minimise the Total Cost of Ownership (TCO)
